

# A TYPE THEORY WITH SCOPED EQUALITY REFLECTION

JONATHAN STERLING

Feel free to change the stuff below as our thinking evolves. This is just a starting point. We have the following judgments:

$\vdash \Sigma \text{ sig}$	$\Sigma$ is a valid signature
$\mathcal{H} \vdash_{\Sigma} \Gamma \text{ ctx}$	$\Gamma$ is a valid context
$\Gamma \vdash_{\Sigma} \mathcal{H} \text{ hints}$	$\mathcal{H}$ is a valid hints set
$\Gamma; \mathcal{H} \vdash_{\Sigma} M \Rightarrow A$	$M$ infers type $A$
$\Gamma; \mathcal{H} \vdash_{\Sigma} M \Leftarrow A$	$M$ checks type $A$
$\Gamma; \mathcal{H} \vdash_{\Sigma} M \equiv N : A$	$M$ equals $N$ at type $A$

The rules for the theory are given inductive-recursively below.

(Signatures)	$\frac{}{\vdash \diamond \text{ sig}} \quad \frac{\vdash \Sigma \text{ sig} \quad \Sigma \# c \quad \diamond \vdash_{\Sigma}^{\circ} A \Leftarrow \mathbb{U}}{\vdash \Sigma, c : A \text{ sig}}$
(Contexts)	$\frac{}{\mathcal{H} \vdash_{\Sigma} \diamond \text{ ctx}} \quad \frac{\mathcal{H} \vdash_{\Sigma} \Gamma \text{ ctx} \quad \Gamma \# x \quad \Gamma; \mathcal{H} \vdash_{\Sigma} A \Leftarrow \mathbb{U}}{\mathcal{H} \vdash_{\Sigma} \Gamma, x : A \text{ ctx}}$
(Hints)	$\frac{}{\Gamma \vdash \diamond \text{ hints}} \quad \frac{\Gamma \vdash_{\Sigma} \mathcal{H} \text{ hints} \quad \Gamma; \mathcal{H} \vdash_{\Sigma} A \Leftarrow \mathbb{U} \quad \Gamma; \mathcal{H} \vdash_{\Sigma} a, b \Leftarrow A}{\Gamma \vdash_{\Sigma} \mathcal{H}, a \equiv b : A \text{ hints}}$
(Projection)	$\frac{x : A \in \Gamma}{\Gamma; \mathcal{H} \vdash_{\Sigma} x \Rightarrow A} \quad \frac{c : A \in \Sigma}{\Gamma; \mathcal{H} \vdash_{\Sigma} c \Rightarrow A} \quad \frac{a \equiv b : A \in \mathcal{H}}{\Gamma; \mathcal{H} \vdash_{\Sigma} a \equiv b : A}$
(Reflect)	$\frac{\Gamma; \mathcal{H} \vdash_{\Sigma} p \Rightarrow \text{ld}_A(M; N) \quad \Gamma; \mathcal{H}, M \equiv N : A \vdash_{\Sigma} C \Leftarrow \mathbb{U} \quad \Gamma; \mathcal{H}, M \equiv N : A \vdash_{\Sigma} e \Leftarrow C}{\Gamma; \mathcal{H} \vdash_{\Sigma} \text{reflect } p \text{ in } e \Leftarrow C}$
(Binders)	$\frac{\Gamma; \mathcal{H} \vdash_{\Sigma} A \Leftarrow \mathbb{U} \quad \Gamma, x : A; \mathcal{H} \vdash_{\Sigma} [x]B \Leftarrow \mathbb{U} \quad Q \in \{\Sigma, \Pi\}}{\Gamma; \mathcal{H} \vdash_{\Sigma} Q_A[x]B \Rightarrow \mathbb{U}}$
